

How to use the Pannus Support

1. Place Pannus Support across patient abdomen with widest elastic portion toward the patient's feet.

2. Place strap around side of table or stretcher railing; bring loose side of strap around to insert into metal ring clasp.
3. Repeat with second strap on opposite side of patient.

4. Fasten strap by bringing the loose end through the two rings; take end over first ring and under second ring; pull to tighten.

5. The Pannus Support can stay attached to the table and lifted up over pannus to expose upper surface of abdomen.
6. Adjust tightness of straps alternately to assure centering of support device and patient comfort.
7. When finished with the Pannus Support, remove from patient.

* This is to be used only as a support device during procedures. Do not use as a restriction/restraint device.
